WorkCRM — how to download and use it

This program runs on **your Windows PC**. It is not a website. Your work is saved on this computer automatically. You do not need GitHub or a terminal.

Part 1 — Download from Google Drive

1. Open the Google Drive link you were sent (email or chat).
2. You should see a folder with at least two files: **WorkCRM.exe** (the program) and this PDF (the instructions).
3. Click **WorkCRM.exe**.
4. Click **Download** (usually at the top of the Drive page). Do not try to “open” or “edit” the program inside Google Drive.
5. If the browser asks, choose **Save** / **Keep**. The file usually lands in your **Downloads** folder.
6. Optional but helpful: move **WorkCRM.exe** to your Desktop or a folder named WorkCRM so you can find it later.

You only need to download the program once (until you are sent a newer copy). This PDF can stay in Drive for reference.

Part 2 — Windows will warn you. That is normal.

WorkCRM is a new, small program. Windows and Chrome have not seen thousands of people download it, so they show a caution. You were given this file on purpose.

If Chrome / Edge says it “isn’t commonly downloaded”:
- Click the three dots next to the file in Downloads.
- Click **Keep** (and **Keep anyway** if it asks again).

If a blue window says “Windows protected your PC”:
1. Do **not** click Don’t run.
2. Click the **More info** link.
3. Click **Run anyway**.

You should only need those extra clicks the first time.

Part 3 — Open the program (read this before you click)

Double-click **WorkCRM.exe**.

Two things should happen:
- A **black window** opens and stays open. That window **is** the program running.
- Your browser opens to `http://127.0.0.1:8765` — that address means “this computer,” not the internet.

Do not close the black window while you are working. Closing it **quits the whole program** and kicks you out of the browser page. Your saved work is not erased, but you will have to double-click WorkCRM.exe again to get back in.

You **can** close the browser tab. You **cannot** close the black window until you are done for the day.

When you are finished: close the black window (X). That is how you quit. To open it later: double-click **WorkCRM.exe** again. Your projects will still be there.

Part 4 — Where your work is saved

You do not pick a “Save” folder. WorkCRM saves by itself on this PC, in a hidden Windows folder named WorkCRM under AppData. Closing the program does not delete it. Deleting WorkCRM.exe does not delete your data, but you need the .exe to open the program again. Keep the .exe somewhere obvious (Desktop is fine).

Part 5 — How to use WorkCRM

WorkCRM is a local notebook for **projects**: a current status, a log of what happened, files you attach, and a printable status report. It is not email and not the cloud.

The sidebar

- **Projects** — the board (your list of work, grouped).
- **Clients** — people and companies you work for.
- **New project** — start a job.
- Search box at the bottom of the sidebar.

1. Client directory (do this first)

A client is a company or person. Build their profile once, then reuse it on every project.

1. Click **Clients**.
2. Click **New client**.
3. Fill in what you know: company name (required), address, contact person, phone, email, billing email, website, notes, and so on. Empty fields are fine.
4. Click **Save profile**.
5. You can open that client later to edit or to see their projects.

2. Create a project

1. Click **New project** (or + Add project on the board).
2. Give it a clear name (example: “Shop PC — Mint install”).
3. Under **Client profile**, pick the client you just saved. (You can also click “New client profile” if you skipped that.)
4. Choose a group if you want: Planning, Execution, or Launch.
5. Set status and priority if you know them.
6. Optional: write an opening status paragraph.
7. Click **Save**.

3. Keep a project up to date

Click the project name on the board to open it.

Current status — one paragraph you would send someone today. Replace it when the story changes. Save status.

Log a step — after a call, email, meeting, decision, process step, or blocker, add it here with who and when. This is the evidence behind the status. Do this every time something happens, not once a month.

On the board you can change Status and Priority in the colored dropdowns. Click a column’s small arrow to rename a column, add a column left or right, or filter the list (like a spreadsheet). Each group (Planning / Execution / Launch) has its own filters.

4. Attachments (PDFs and pictures)

On the project page, use **Attachments**.

1. Click **Choose file** / the file box.
2. Pick a PDF, picture (PNG, JPG, GIF, WebP), TXT, or CSV. About 12 MB max per file.
3. Click **Upload**. Pictures show a small preview. PDFs are a clickable name.
4. Files stay on this computer with the project. They are not emailed and not uploaded to the internet.
5. **Remove** deletes that file from the project.

5. Status report

On the project page click **Status report**. That page combines the current status plus the log. Use **Print / PDF** in the browser if you need a copy to send or file.

Quick reminder

Do	Don't
Leave the black window open while you work	Close the black window — that quits the whole program
Double-click WorkCRM.exe to open it again	Expect Google Drive to run the program for you
Keep the .exe on this PC (Desktop is fine)	Delete the .exe and hope the program still opens
Add a client, then a project, then log + files	Skip the log — the status report needs it

If something looks broken, close the black window, double-click WorkCRM.exe again, and retry. Your saved work should still be there.
